INTRODUCTION

Indian sub continent is prone to multiple hazards and highly vulnerable to both natural and man-made disasters that generally result in heavy loss of life; sometimes even leading to mass casualties. The last few decades have shown an increased frequency of disasters resulting in large number of human casualties and huge economic losses. In case of many such disasters, human and economic losses can be minimized to quite an extent even though they may not be totally prevented.

2. There has been a paradigm shift in the government's focus from a rescue, relief and recovery-centric approach to planning, prevention, mitigation and preparedness driven approach. Community is the first responder to any type of disaster. Planning and preparedness at all level is most essential to face the challenges posed by disasters.

3. U.T. of Puducherry has a coastline of 45 km stretching along the Bay of Bengal and to some extent along the Arabian Sea. Puducherry region alone has 24 km of coastline, Karaikal has 20 km stretch and Mahe has 1 km stretch of coastline. The U.T. also has 675 sq. km of inshore waters. The Puducherry U.T. is prone to many natural hazards like floods, cyclones and earthquakes. In the past, cyclones and associated storm surges have inundated vast area of land along the coastal stretches of Puducherry U.T. The major part of this U.T. is lying on the coast of Bay of Bengal and it is influenced by North East Monsoon. The heavy rains/cyclones that occur under the influence of North East Monsoon sometime cause heavy damage to life and property.

4. While not all natural calamities can be predicted and prevented, a state of preparedness and ability to respond quickly to a natural calamity can considerably mitigate loss of life and property and the human suffering and restore normalcy at the earliest. It is, therefore, of paramount importance that a plan of action for dealing with contingencies that arise in the wake of disasters is formulated and periodically updated.

5. Every planning has its own aims and objectives. Although the features of both Puducherry and Karaikal districts of this U.T. are not much different, there are certain peculiar characteristics that make the districts unique. The basic objective of this Disaster Management Action Plan is to protect all the residents and every kind of wealth from all sorts of untoward incidents through the following objectives.

1.1 Objectives of this Action Plan

- a. To prevent loss of human lives and property.
- b. Institutionalization of disaster management in district administrations.
- c. Encouraging a culture of disaster preparedness.
- d. Vulnerability reduction and disaster mitigation through better planning process.
- e. Creation of the best Govt. mechanism to handle any unprecedented events.
- f. Instant response and effective decision making in disasters.
- g. Better coordination of relief and rehabilitation in the aftermath of a disaster.
- h. Better coordination of all line departments in disaster management.
- i. Regular update of resources available in and around the Districts.

As such, this plan has been prepared taking into account the existing infrastructure, available resources, previous type of disasters that have occurred and their possibility of recurrence in future. It is meant to serve as an action plan for the District Administration, as well as to the other Governmental organizations and others.

To mitigate miseries of sufferings of any calamity, relief in cash and kind is provided to the affected and rescue operations are provided on considerable scale. Besides this repair and restoration works are taken on priority. To cope up with the situations, State Emergency Operation Centre in Puducherry functions round the clock. Different Department have different roles to play in the disaster period as defined in the Crisis Management Framework formulated by the Department of Revenue and Disaster Management. The need for an effective disaster management strategy to lessen the disaster impact is increasingly being felt in many quarters. The Government, as a major respondent in disaster situation, is responsible for preparedness and mitigation measures, in additions to organizing an effective disaster response mechanism. In this contest, uniformity in response mechanism, including scale of assistance in various parts of the country is imperative. In view of the increasing trend and intensity of natural disasters in recent past, strengthening organizational structure of disaster management at various levels and revising/regular updating of codes/manuals, disaster plan to the state is vital.

This Action Plan is to help the officials of DRDM to tackle disasters in tune with the provision of the Crisis Management Framework and SOPs (CMF). The jurisdictional SDMs and Tahsildars are required to act in consonance with the CMF and this Action Plan 2016.

PROFILE OF UT OF PUDUCHERRY

The Union Territory of Puducherry spread in an area of 492 Sq. Km. comprises four erstwhile French establishments of Puducherry, Karaikal, Mahe and Yanam.

2.1 LOCATION

The Union Territory of Puducherry consists of two districts, viz., Puducherry and Karaikal, situated at different geographical locations isolated from one another. Puducherry District comprises Puducherry, Mahe and Yanam regions. Karaikal regions forms the Karaikal District. Puducherry region, which is the largest of all the four, lies on the east-coast, and consists of 12 scattered areas lying in between 11° 42' 12' 30' N, and between 76° 36' and 79° 53' E. Karaikal region is about 150 Km. south of Puducherry and is sandwiched by Nagapattinam District of Tamil Nadu. It is located between 10° 49' and 11° 01' N, and 79° 43' and 79° 52' E. Yanam region is located between 16° 42' and 16° 46' N and 82° 11' and 82° 19' E. at about 840 Km. North East of Puducherry near Kakinada in Andhra Pradesh. Mahe region lies almost parallel to Puducherry between 11° 42' and 11° 43' N and 75° 31' and 75° 33' E at 653 Km. away on the west-coast near Tellicherry in Kerala.

2.2 CLIMATE

Semi-arid type of climate, with a mean annual temperature of around 30° C and 70-85 % relative humidity, is prevalent in the Union Territory. While Puducherry and Karaikal regions receive rain mostly through North-East monsoon, Mahe and Yanam regions benefit from the South-West monsoon.

2.3 TOPOGRAPHY

2.3.1 Puducherry Region

The region is flat country of average elevation of about 15 meters above sea level, intersected by the deltaic channels of River Gingee and Pennaiyar and other streams forming the two main drainage basins, interspersed with lakes and tanks. To the North-West of Puducherry town, a girdle of low hills (or an elevated ground of about 30 meters high) is noticed to extend in a East North East – West South West direction. This high ground suddenly emerges from the low alluvial plain country known as “Les Montagnes Rouges” or the “Red Hills of Puducherry”, or Gorimedu, probably so named after the memorials put up during the first siege of Puducherry (1760). This forms the most prominent feature in the landscape. River Gingee crosses the region diagonally from north-west to south-east. Pennaiyar forms the southern border. Actually the alluvial delta of Pennaiyar is almost on dead level ground, only a few meters above the sea. To the north-west of these hills is a section of fossiliferous limestone formations of the Cretacian age. To the south of this area is situated the alluvial tract of Varahanadi (Gingee) and to the north is the recent alluvium.

2.3.2 Karaikal Region

Forming part of fertile delta, the region is completely covered by the distributaries of river Kaveri. Covered completely by a thick mantle of alluvium of variable thickness, the lie of the region is flat having gentle slope towards the Bay of Bengal in the east. It is limited on the

north by the Nandalar and on the south east by the Vettar. The group of rocks known as Cuddalore formations is met with in the area contiguous to Karaikal region in Tanjore District.

2.3.3 Yanam Region

The region is bounded on the east and south by the river Godavari which discharges itself into the Bay of Bengal after flowing about 14 km. towards south east. The town of Yanam is located at spot where the River Coringa and Godavari separate to divide the region into two parts, one on the east and the other on the west. The entire region is composed of a flat, monotonous terrain without any distinct topographical feature.

2.3.4 Mahe Region

Mahe is a small area bounded on the south west by the Arabian Sea, on the north by the River Ponniyam (Moolakadavu) and on the other sides by a stretch of calcareous hills of medium height which are linked to the ghats by a series of wooded hillocks. The river Mahe which flows towards the west, divides the region into two parts.

Major food crops grown in Puducherry are Paddy, Groundnut, Sugarcane, Cholam, Cambu, Redgram, Tapioca, Greengram, Blackgram, Coriander, Banana, Maize, Varagu, and Cashewnut. Some other crops that are grown in the region are Gingelly, Cotton, Groundnut, and coconut.

2.5 CLIMATE AND WEATHER EXTREMES

The Puducherry region experiences a hot and tropical retarded monsoonic climate characterized by small daily range of temperature, humid weather and moderate rainfall. There is no clear cut demarcation of seasons and the months from March to June is considered as summer and December to February as cooler months.

2.5.1 Rainfall:

The average annual rainfall for the period is 1234 mm. However, the quantum of normal rainfall is very fluctuating.

The Puducherry region gets its rainfall from the Southwest monsoon from June to September and the Northeast monsoon from October to December. Meher-Homji while analyzing the climate of Puducherry has pointed out, that based on the data for the period 1911-1961, the mean of the precipitation for the period October-January is 808 mm as opposed to 330 mm received during June-September. About 50% of the total rain is concentrated over the two months October-November. However, in spite of such high differences in the quantity of the rain between the two monsoons, the difference in the number of rainy days during the two periods is considerably less; 21 during June-September as against 28 for October-January. Thus the difference in the number of rainy days is just a meager 7 days. It may be inferred that though the rainfall received during South West monsoon is less yet it is well distributed enabling proper utilization of the rainfall.

The variability of rainfall is fairly large and that of seasonal/monthly rainfall still larger. In the Puducherry region, normal rainfall occur once in three years, slight deficit / excess rainfall occur once in five years and the large excess / large deficit rainfall occur once in hundred years.

2.5.2 Temperature:

The winter and summer months are not very severe. The temperature ranges from a minimum of 17°C to a maximum of 41°C. High variation is observed in the lower limit of minimum temperature during July to December, similarly there is significant variation in the upper limit of minimum temperature during the months of June and October.

2.5.3 Humidity

The humidity is comparatively higher ranging from 65% to 75% in general and becoming as high as 83% at times.

2.5.4 Wind speed

During Southwest monsoon period, wind blows predominantly from West-South-West direction, some times from Southwest and West directions. During the Northeast monsoon season, wind blow predominantly from north and sometime from North-North-West and North-North-East directions. The average wind velocity during winter period is 8.7 km/hr at 08.30 hr and 12.5km/hr. at 17.30 hrs, during the hot weather period; it is 10.2 km/hr at 08.30 hrs, 18.1 km/hr at 7.30 hrs and 12.0 km/hr for 24 hrs. During the Southwest monsoon, the wind velocity is 11.2 km/hr at 08.30 hrs, 14.1 km/hr at 17.30 hrs and 11.2 km/hr for 24 hrs and

during the Northeast monsoon; it is 9.1 km/hr at 08.30 hrs. 9.6 km/hr at 17.30 hrs and 8.7 km/hr for 24 hrs.

2.5.5 Solar Radiation

Solar radiation intensity (from 06.00 to 19.00 hrs) during winter ranges from 0.07 to 62.66 Cal / cm² / hr, during hot weather range from 0.92 to 71.87 Cal / cm² / hr, during southwest monsoon it range from 1.00 to 59.46 Cal/ cm²/hr and during north-east monsoon it range from 0.10 to 44.43 Cal/ cm²/hr.

2.5.6 Evaporation

Evaporation during winter period was 237 mm, hot weather period was 498 mm, Southwest monsoon period was 694 mm and in the Northeast monsoon period was 301 mm. the annual evaporation is of the order of 1600 mm.

2.5.7 Potential Evapo-Transpiration (Thornthwaite's Method)

Mean monthly temperature of Puducherry station were utilised for computing month-wise potential Evapo-transpiration. During the winter period, the average potential Evapo-transpiration is 97 mm, in hot weather period it increases from 142 to 183 mm, during the Southwest monsoon, it decreases from 183 to 156 mm and in the Northeast monsoon period, it further decreases from 145 to 94 mm.

2.5.8 Relative Humidity

The average relative humidity during the winter period is 81% at 08.00 hrs and 71% at 18.00 hrs. During the hot weather period, it ranges from 81 % to 73% at 08.00 hrs and 75% at 18.00 hrs. During the Southwest monsoon, it ranges from 66% to 81% at 08.00 hrs and 64% to 79% at 18.00 hrs and during the Northeast monsoon; it is 87% at 08.00 hrs and 80% at 18.00hrs.

2.5.9 Sunshine Hours

During the winter period, the average sunshine hours is 10.2 hrs, during the hot weather period, it decreases from 10.3 to 9.5 hrs, during the Southwest monsoon and the Northeast monsoon periods, the average sunshine hours is about 7.1.

2.5.10 Cloud Density

During winter, the average cloud density is 59 percent in the mornings and 55 percent in the evenings. During the hot weather period, the average cloud density increases from 50 percent to 74 percent in the morning and 36 percent to 75 percent in the evenings. During Southwest monsoon period, the average is 84 percent in the mornings and 89 percent in the evenings. During Northeast monsoon period, the average is 77 percent in the mornings and 82 percent in the evenings.

2.5.11 Cyclone / Severe Cyclonic Storms (Cs/Scs):

Puducherry and the adjoining areas are affected by Cyclone/ Severe Cyclones, which originate from the Bay of Bengal and move in a westerly northwesterly direction. From the frequency point of view there is no possibility of Cs/SCs during January and February as well as June to September. During the Northeast monsoon period, the maximum number of cyclones/severe cyclones has been in number (i.e) 6 in frequency in the month of November followed by two in December and April and one each during March, May and October. The highest estimated wind speed in the order of 189 km/hr and the lowest estimated wind speed in the order of 83 km/hr have hit the Puducherry during the past.

2.6 AGRO-CLIMATE CLASSIFICATION OF THE PUDUCHERRY AREA

Climatic classification is made according to the Thornthwaite's technique using potential Evapo-transpiration values computed as per Thornthwaite's formula. As per this, the region falls under Semi-arid region. The technical data of the region are given below. From the above data it is clear that this region comes under dry sub-humid, mega thermal climate with moderate winter water surplus.

Details Technical Data on Evapo-Transpiration

Potential Evapo-transpiration	: 1732mm
Summer concentration	: 28.2 percent
Mean annual precipitation	: 1227 mm
Water surplus	: 308.5 mm
Water deficiency	: 648.0 mm
Humidity index	: 18.7
Aridity index	: 39.3
Moisture index	: 20.6

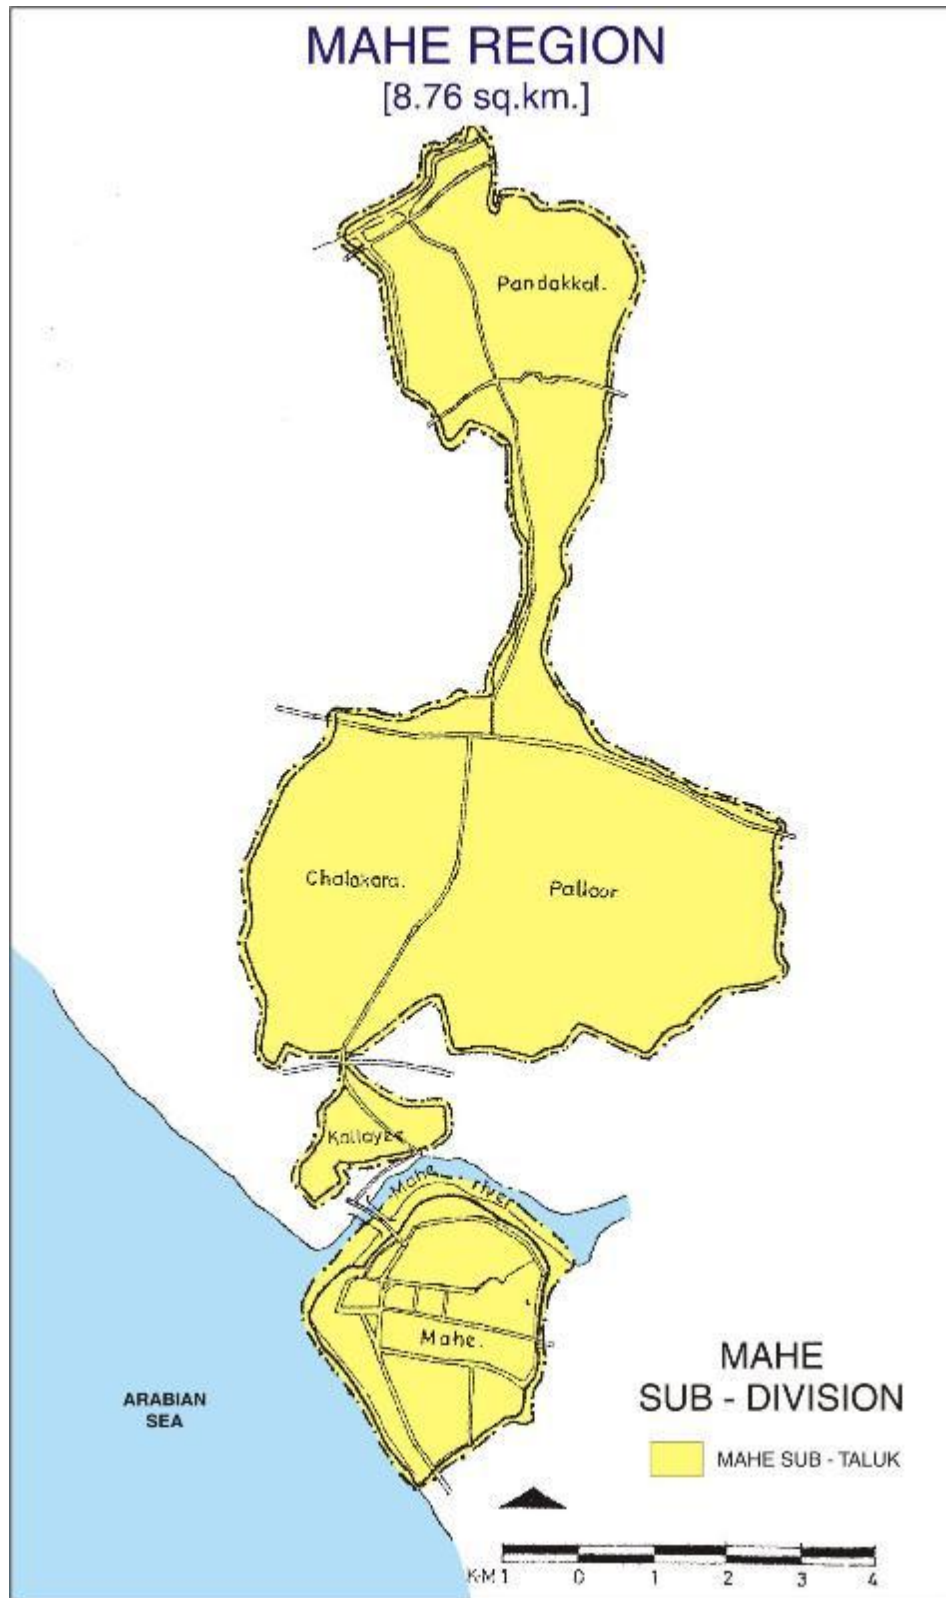

To sum up, the Puducherry and its neighborhood falls under rainfall surplus category and the temperatures are high in the months of May and June. The areas are chiefly benefited from the Northeast monsoon recording to 62 percent of the total amount of rainfall. It is also located close to the cyclone prone zone of the East coast namely Cuddalore. The maximum temperature varies from 28.2°C to 36.6°C and monthly potential Evapo-transpiration varies from 92 to 183 mm.

2.7 IRRIGATION & DRAINAGE SYSTEM IN PUDUCHERRY

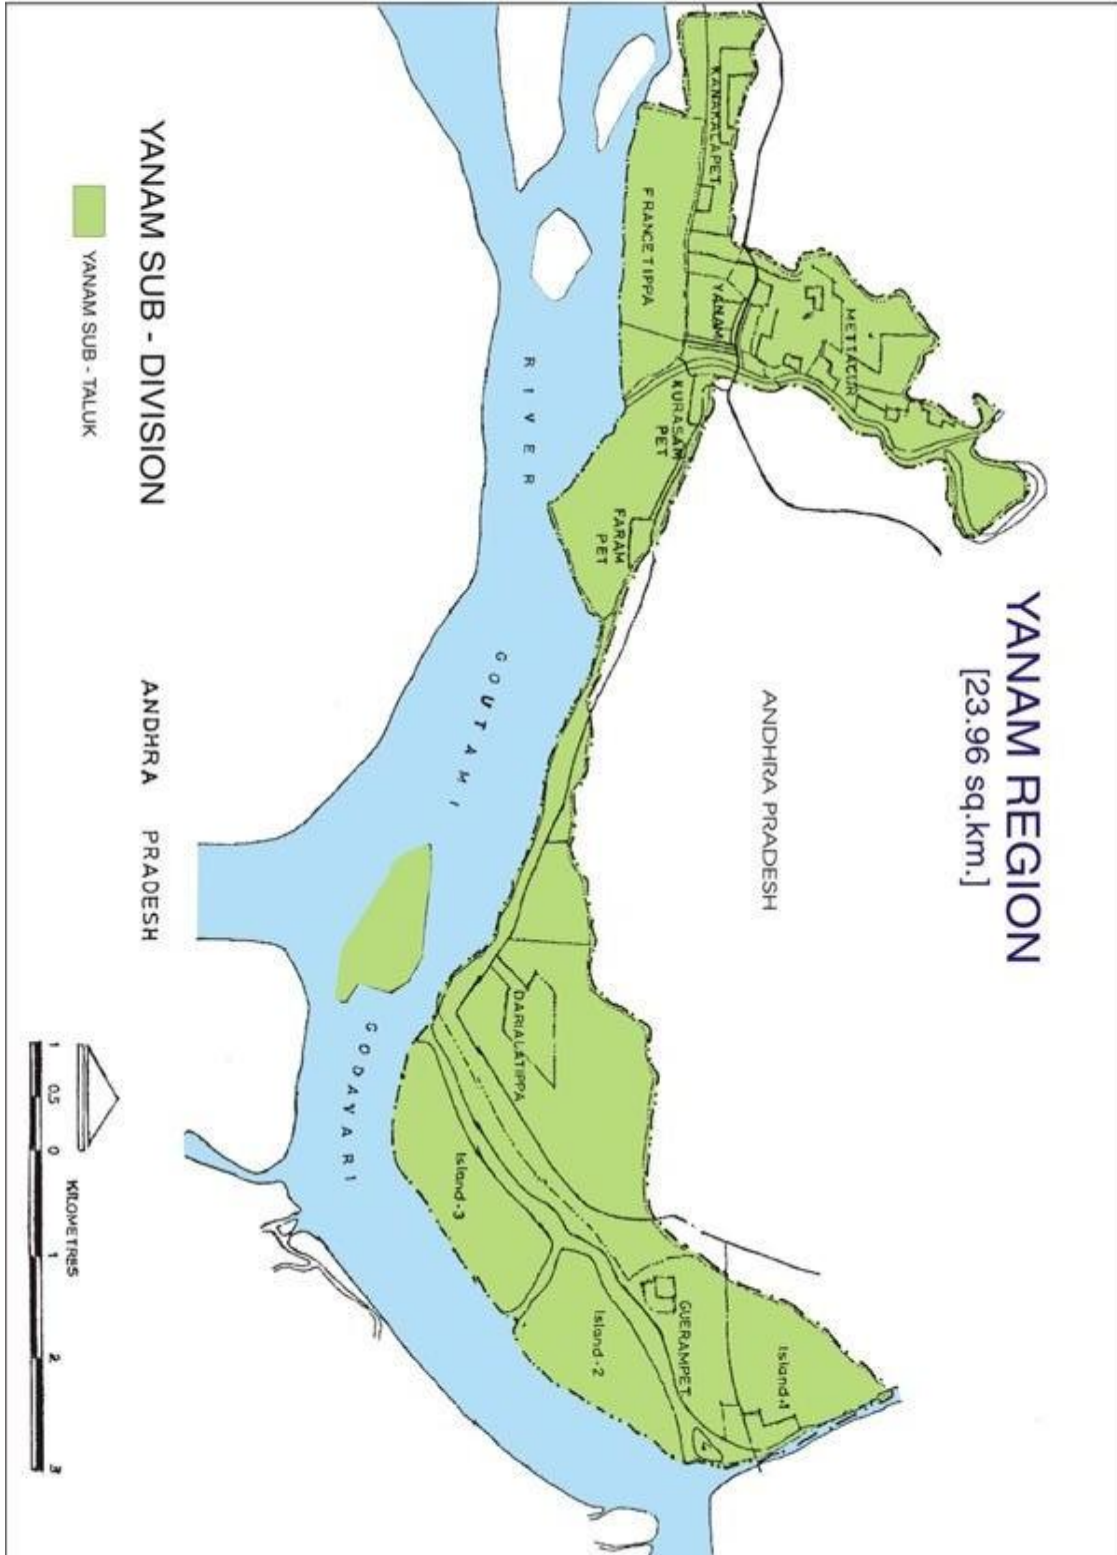

In Puducherry region, as per the statistical records of the year 2014-15, the total irrigated area (Gross is ,21,627 Ha). Tube wells and canals are main source of irrigation. Two rivers run into Puducherry region flowing from the neighbouring district of Tamilnadu at the estuary point viz., South Pennaiyar and Gingiyar, which is otherwise called as Sankaraparani. The two rivers and their branches are not perennials.

The Puducherry region is bestowed with 83 tanks which scattered in all over the region usually fills up during the North East Monsoon. In the back drop of depletion of ground water table, water is stored in the tanks for replenishing the ground water. In such way, tanks are serving only as a recharging mechanism by which groundwater table have enhanced considerably simultaneous with the prevention of intruding seawater in to sweet water aquifers. The water availability from this source for irrigation has been firmly inadequate. Hence, the necessity for more dependency on groundwater has been automatically increasing. As far as Puducherry region is concerned 100% of irrigation activities are undertaken depending upon ground water source. Paddy is the principal crop amongst all the crops cultivated in the wet land for three crop season irrigated my means of tube wells. Ponds exist in all over Puducherry region but they are not used for agricultural activities.

4 CHAPTER VULNERABLE AREAS (FLOOD, CYCLONE)

Vulnerability is defined as “the extent to which a community, structure, service, or geographic area is likely to be damaged or disrupted by the impact of particular hazard, on account of their nature, construction and proximity to hazardous terrain or a disaster prone areas”. The concept of vulnerability therefore leads to calculation of risk. Risk management would therefore mean the level of social and economic ability to cope with the resulting event in order to resist major disruption or loss. This susceptibility and vulnerability to each type of threat will depend on its respective differing characteristics.

2. The rainfall data and water holding capacity of different tanks mentioned in the previous chapter give knowledge to what extent the community could withstand the flood situation. But it is not predictable in respect of low lying areas where the habitation exists as the situation not only depends on the rainfall but to what extent the area has been facilitated in draining the rainwater. Therefore in order to have periodical maintenance and to monitor the situation during rainy season, a list of low lying areas is given in the Annexure - V.

3. Those vulnerable have to be given top priority, immediate relief and rehabilitation has to be effected without much delay. Preparedness and prevention measures are cast upon more particularly on PWD and Local Administration Department and their duties and responsibility are enunciated in various chapters of this manual.

4.1 HAZARD PROFILE OF THE PUDUCHERRY REGION

4. Heavy rains showers during the months of October, November and December inundates low-lying areas, coastal areas and the areas nearby major irrigation sources. Cyclones are also part of the North East monsoon. Due to floods, sudden outbreak of several water borne diseases was also experienced in the past. This Action Plan has to be implemented keeping in mind the following hazards which also include natural calamities like Drought, Tsunami and Man-made disaster like Chemical pollution, Fire accidents etc.

5. Puducherry District consists of Four taluks viz. Puducherry, Oulgaret, Villianur and Bahour. Among these, Puducherry and the Bahour are the coastal taluks that lies in the heavy wind and cyclone zone while other four taluks lies in the flood zone. Puducherry has the land slope from west to east and from north to south. Since the district is situated at the seacoast, it drains water not only

within the district, but also from the catchments close by. Relatively the mid land slopes make drainage difficult.

6. Puducherry has always been classified as a multi-hazard prone district. Cyclones and floods have wreaked havoc in the district several times in the past few centuries. The district also falls within the zone-3 with respect to earthquakes.

7. A part of the problem owes its genesis to the location of the district. The district has a coastline of approximately 24 km. Therefore the district is vulnerable to the cyclonic depressions and the resultant rains, which cause floods.

8. Puducherry has an area of 292 Sq. Km. comprising of extremely fertile and well irrigated lands benefiting from water draining over fields and through major and minor river systems. The district however suffers from the flooding when excess water flows down these local rivers and over the fields due to Northeast monsoon rains in the river basins and in the district itself.

9. The drainage is poor and the encroachments over the drought years have led to a scenario where, even rainfalls, which are slightly above normal, can cause floods disrupting the normal course of work. Coupled with this is the perennial problem of low water carrying capacity of the lakes.

10. Natural disasters often tend to set the clock back in time further accentuating the problem as they lead to serious disruption of the functioning of a society causing widespread losses. These losses far exceed the affected society's ability to cope with it using its own resources.

5 CHAPTER

CRISIS MANAGEMENT FRAMEWORK AND DEPARTMENT OF REVENUE AND DISASTER MANAGEMENT

The Department of Revenue and Disaster Management, Puducherry has formulated the “Crisis Management Framework and Standard Operating Procedures” for the UT of Puducherry. Different types of crises, various elements and phases of crisis management, Incident Response System (IRS), Emergency Support Functions and SOPs for ESF Teams and their Quick Response Teams (QRTs) are explained in the Framework.

5.1 THE INCIDENT COMMAND SYSTEM FOR PUDUCHERRY

The Incident Command System (ICS) is an on-scene, all-risk, flexible modular system adaptable to any scale of natural as well as man-made emergency/incidents. The ICS seeks to strengthen the existing disaster response management system by ensuring that the designated controlling/responsible authorities at different levels are backed by trained Incident Command Teams (ICTs), whose members have been trained in the different facets of emergency/disaster response management. The ICS will not put in place any new hierarchy or supplant the existing system, but will only reinforce it. When an ICT is deployed for an incident, all concerned agencies of the Government will respond as per the assessment of the Team.

This system therefore enables proper coordination amongst the different agencies of the Government. The five Command functions in the Incident Command System are as follows:

1. Incident command - Has overall responsibility at the incident. Determines objectives and Establishes priorities based on the nature of the incident, available resources and Government policy.
2. Operations- Develops tactical organization and directs all resources to carry out the Incident Action Plan (IAP).
3. Planning- Develops the Incident Action Plan (IAP) to accomplish the objectives. Collects and evaluates information, and maintains status of assigned resources.
4. Logistics- Provides resources and all other services needed to support the organization.
5. Finance/Administration-Monitors costs related to the incident, provides accounting Procurement, time recording, cost analysis, and overall fiscal guidance.

In the District level, Incident Command System the Collector is the Incident Commander. Senior Superintendent of Police (L&O) is the Safety Officer, Public Relations Officer, Information Department is the Information Officer and Commissioner, Municipality is the Liaison Officer to the Incident Commander. Planning Unit headed by Joint Director (Planning), Logistic Unit headed by Superintending Engineer (PWD), Operation Unit headed by Sub Divisional Magistrate and Finance headed by Deputy Director of Accounts and Treasuries. Situation unit headed by Block Development Officer, Resource Unit headed by Regional Transport Officer, Supply unit by Deputy Director (Civil Supplies), Medical Unit by Deputy Director (Health).

c) Incident Command System for Mahe and Yanam Regions:

Incident command system for Mahe and Yanam regions will be headed by the Regional

Administrators, respectively and supported by representatives of the Departments as shown for the District Incident Command System.

5.2 EMERGENCY SUPPORT FUNCTIONS

Emergency Support Functions are some of the most common functions carried out in any response activity to a disaster either man-made or natural. The causes of emergencies vary but the potential effects of these emergencies are similar. Irrespective of the disaster or crisis situation the types of support functions are fairly similar and such support functions are called as Emergency Support Functions.

The Crisis Management Plan is based on the premise that the Emergency Support Functions (ESFs) performed by various Departments and organizations during emergency operations generally are similar to the normal day to day functions. The same personnel and material resources will be employed in both cases. Day-to-day tasks or operations that do not contribute directly to the emergency may be suspended or re-directed for the duration of any emergency disaster and efforts that would normally be assigned to those tasks will be channeled towards emergency and disaster ESF as assigned.

Emergency Support Functions is a functional area of response activity established to facilitate the delivery of critical assistance required during their immediate response phase of a disaster / crisis to save lives, protect property and public health, and to maintain public safety.

It is important to note that while the causes of emergencies vary greatly, the potential effects of emergencies do not. This means that the District can plan to deal with effects common to several hazards, rather than develop separate plans for each hazard. For example, earthquakes and floods, can force people from their homes. The District administration can develop a plan and an organization around the task, or function, of finding shelter and food for the displaced with minor adjustments for the probable rapidity, duration, location, and intensity of different hazards based on the requirements. The District administration can do the same for other common tasks. In fact, a critical aspect of planning for the response to emergency situations is to identify all of these common tasks, or functions, that must be performed, assign responsibility for accomplishing each function, and ensure that tasked organizations have prepared SOPs that detail how they will carry out critical tasks associated with the larger function.

The incident commander (State level) is authorized to trigger a particular ESF into operation based on the nature and magnitude of Crisis/Disaster.

5.3 ROLE OF DEPARTMENT OF REVENUE & DISASTER MANAGEMENT

The Department of Revenue and Disaster Management is the Nodal Department for management of disasters. DRDM is also entrusted with the entire gamut of relief and rehabilitation activities in the wake of any disaster. The Crisis Management Framework provided that the Relief and Rehabilitation Commissioner (RRC) is the Incident Commander for the Union territory while the District Collectors, Puducherry and Karaikal are the incident commander for the respective regions and the Regional Administrators, Mahe / Yanam who are also the Sub/Deputy Collectors (Rev.) are the incident commanders for Mahe and Yanam, respectively. Therefore, the DRDM is responsible for management of disasters and the relief and rehabilitation activities undertaken post disaster.

In the Crisis Management Framework (CMF), the DRDM is entrusted with three vital Emergency Support Functions, viz.,

- a. ESF – 3 - Emergency Public Information, Help Line & Warning
- b. ESF – 6 – Evacuation, and
- c. ESF – 8 – Damage Assessment.

Besides the above ESFs, DRDM is also a Support Agency for various ESFs and has nominated Team Members for other ESF teams as well.

5. The CMF explains in detail the variety of functions/tasks to be undertaken by the DRDM in respect of the said three ESFs. All the three ESFs have their own Quick Response Teams (QRTs) and their SOPs have also been explained. The details of various ESFs and their members along with the contact numbers is given in the Annexure - XIII. Subject: - Items and Norms of assistance from the State Disaster Response Fund (SDRF) and the National Disaster Response Fund (NDRF) for the period 2015- 2020.

Sir/ Madam,

2. The revised items and norms can also be downloaded from website of Disaster Management Division of Ministry of Home Affairs i.e. www.ndmindia.nic.in.
