1 CHAPTER INTRODUCTION

Indian sub continent is prone to multiple hazards and highly vulnerable to both natural and man-made disasters that generally result in heavy loss of life; sometimes even leading to mass casualties. The last few decades have shown an increased frequency of disasters resulting in large number of human casualties and huge economic losses. In case of many such disasters, human and economic losses can be minimized to quite an extent even though they may not be totally prevented.

2. There has been a paradigm shift in the government's focus from a rescue, relief and recovery-centric approach to planning, prevention, mitigation and preparedness driven approach. Community is the first responder to any type of disaster. Planning and preparedness at all level is most essential to face the challenges posed by disasters.

3. The U.T. of Puducherry has a coastline of 45 km stretching along the Bay of Bengal and to some extent along the Arabian Sea. Puducherry region alone has 24 km of coastline and Mahe has 1 km stretch of coastline. The U.T. also has 675 sq. km of inshore waters. The Puducherry U.T. is prone to many natural hazards like floods, cyclones and earthquakes. In the past, cyclones and associated storm surges have inundated vast area of land along the coastal stretches of Puducherry U.T. The Puducherry and Yanam regions are lying on the coast of Bay of Bengal and it is influenced by North East Monsoon. The heavy rains/cyclones that occur under the influence of North East Monsoon sometime cause heavy damage to life and property.

4. While not all natural calamities can be predicted and prevented, a state of preparedness and ability to respond quickly to a natural calamity can considerably mitigate loss of life and property and the human suffering and restore normalcy at the earliest. It is, therefore, of paramount importance that a plan of action for dealing with contingencies that arise in the wake of disasters is formulated and periodically updated.

5. Every planning has its own aims and objectives. The basic objective of this District Disaster Management Action Plan is to protect all the residents and every kind of wealth from all sorts of untoward incidents through the following objectives.

1.1 Objectives of this District Disaster Management Action Plan

- a. To prevent loss of human lives and property.
- b. Institutionalization of disaster management in district administrations.
- c. Encouraging a culture of disaster preparedness.
- d. Vulnerability reduction and disaster mitigation through better planning process.
- e. Creation of the best Govt. mechanism to handle any unprecedented events.
- f. Instant response and effective decision making in disasters.
- g. Better coordination of relief and rehabilitation in the aftermath of a disaster.
- h. Better coordination of all line departments in disaster management.
- i. Regular update of resources available in and around the Districts.

As such, this plan has been prepared considering the existing infrastructure, available resources and lessons learned from previous disasters occurred and their possibility of recurrence in future. It is meant to serve as an District Disaster Management Action Plan for the District Administration, as well as to the other Governmental organizations and others.

To mitigate misery of sufferings of any calamity, relief in cash and kind is provided to the affected and rescue operations are provided on considerable scale. Besides this repair and restoration works are taken on priority. To cope up with the situations, State Emergency Operation Centre in Puducherry functions round the clock. Different Line Departments have different roles to play in the disaster period as defined in the Crisis Management Framework formulated by the Department of Revenue and Disaster Management. The need for an effective disaster management strategy to lessen the disaster impact is increasingly being felt in many quarters. The Government, as a major respondent in any disaster situation, is responsible for preparedness and mitigation measures, in addition to organizing an effective disaster response mechanism. In this contest, uniformity in response mechanism, including scale of assistance in various parts of the country is imperative. In view of the increasing trend and intensity of natural disasters in recent past, strengthening organizational structure of disaster management at various levels and revising/regular updating of codes/manuals, disaster plan to the state is vital.

To implement the Disaster Management activities and to tackle any eventually during all phases of disaster, UT of Puducherry has constituted various Authorities, Institutional setup, viz Union Territory of Puducherry Disaster Management Authority (UTPDMA), District Disaster Management Authorities (DDMAs), State Executive Committee (SEC), Crisis Management Framework etc. for implement roles and responsibilities, powers, functions and duties to be followed by the Officials, staffs, individuals, public sectors of Union Territory of Puducherry in line with provision under guidelines of National Disaster Management Authority, Government of India and Disaster Management Act 2005. Further Sections 63, 65, 69 and 56 of the DM Act 2005 gives various powers to the State / District Authorities to service the compliance and to utilise the services of various officers for relief and rescue operations during and before disasters which are being elaborated in the foregoing chapters.

This District Disaster Management Action Plan is to help the officials of DRDM and all line Departments to tackle effectively any emergencies/disasters in tune with the provisions of the Crisis Management Framework (CMF) and SOPs. The Jurisdictional SDMs and Tahsildars, Officials / staffs of Government Departments, Public sectors. etc are required to act in consonance with the Crisis Management Framework and this District Disaster Management Action Plan 2018.

This District Disaster Management Action Plan is not Disaster or Department specific and is much helpful to be in a preparedness stage and to meet any eventuality during North East Monsoon, South West Monsoon, Tsunami, flood, earthquake etc. This guidelines and information provided here should not be taken as exhaustive and any action has to taken accordingly to tackle any situation by judicious application of mind as warranted in public interest.

2 CHAPTER

PROFILE OF PUDUCHERRY DISTRICT

The Union Territory of Puducherry spread in an area of 492 Sq. Km. comprises four erstwhile French establishments of Puducherry, Karaikal, Mahe and Yanam.

2.1 LOCATION

The Puducherry district consists of three regions viz., Puducherry, Mahe and Yanam situated at different geographical locations isolated from one another. Puducherry region is the largest urban agglomeration of all the three regions, occupies an area of 294 km², lies on the east-coast of southern India, and consists of 12 scattered areas lying in between 11° 46' & 12° 30' N, and between 79° 36' & 79° 53' E. Yanam region is lies in the east of Southern India, an area of 8.76 km² and Mahe region is lies in the Western coast of southern India, an area of 30 km²

2.2 CLIMATE

Semi-arid type of climate, with a mean annual temperature of around 30° C and 70-85 % relative humidity, is prevalent in the Puducherry District. While Puducherry regions receive rain mostly through North-East monsoon, Mahe and Yanam regions benefit from the South-West monsoon.

2.3 TOPOGRAPHY

2.3.1 Puducherry Region

The region is flat country of average elevation of about 15 meters above sea level, intersected by the deltaic channels of River Gingee and Pennaiyar and other streams forming the two main drainage basins, interspersed with lakes and tanks. To the North-West of Puducherry town, a girdle of low hills (or an elevated ground of about 30 meters high) is noticed to extend in a East North East – West South West direction. This high ground suddenly emerges from the low alluvial plain country known as “Les Montagnes Rouges” or the “Red Hills of Puducherry”, or Gorimedu, probably so named after the memorials put up during the first siege of Puducherry (1760). This forms the most prominent feature in the landscape. River Gingee crosses the region diagonally from north-west to south-east. Pennaiyar forms the southern border. Actually the alluvial delta of Pennaiyar is almost on dead level ground, only a few meters above the sea. To the north-west of these hills is a section of fossiliferous limestone formations of the Cretaceous age. To the south of this area is situated the alluvial tract of Varahanadi (Gingee) and to the north is the recent alluvium.

Gross area irrigated - 19,832.00 ha

II – Agriculture

Cultivable area - 22,411.00 ha

Forest area - 669.36 ha

Non-cultivable area - 11,811.00 ha

Major food crops grown in Puducherry are Paddy, Groundnut, Sugarcane, Cholam, Cambu, Redgram, Tapioca, Greengram, Blackgram, Coriander, Banana, Maize, Varagu, and Cashewnut. Some other crops that are grown in the region are Gingelly, Cotton, Groundnut, and coconut.

2.5 CLIMATE AND WEATHER EXTREMES

The Puducherry region experiences a hot and tropical retarded monsoonic climate characterized by small daily range of temperature, humid weather and moderate rainfall. There is no clear cut demarcation of seasons and the months from March to June is considered as summer and December to February as cooler months.

2.5.1 Rainfall:

The average annual rainfall for the period is 1234 mm. However, the quantum of normal rainfall is very fluctuating.

The Puducherry region gets its rainfall from the Southwest monsoon from June to September and the Northeast monsoon from October to December. Meher-Homji while analyzing the climate of Puducherry has pointed out, that based on the data for the period 1911-1961, the mean of the precipitation for the period October-January is 808 mm as opposed to 330 mm received during June-September. About 50% of the total rain is concentrated over the two months October-November. However, in spite of such high differences in the quantity of the rain between the two monsoons, the difference in the number of rainy days during the two periods is considerably less; 21 during June-September as against 28 for October-January. Thus the difference in the number of rainy days is just a meager 7 days. It may be inferred that though the rainfall received during South West monsoon is less yet it is well distributed enabling proper utilization of the rainfall.

The variability of rainfall is fairly large and that of seasonal/monthly rainfall still larger. In the Puducherry region, normal rainfall occur once in three years, slight deficit / excess rainfall occur once in five years and the large excess / large deficit rainfall occur once in hundred years.

2.5.2 Temperature:

The winter and summer months are not very severe. The temperature ranges from a minimum of 17°C to a maximum of 41°C. High variation is observed in the lower limit of minimum temperature during July to December, similarly there is significant variation in the upper limit of minimum temperature during the months of June and October.

2.5.3 Humidity

The humidity is comparatively higher ranging from 65% to 75% in general and becoming as high as 83% at times.

2.5.4 Wind speed

During Southwest monsoon period, wind blows predominantly from West-South-West direction, some times from Southwest and West directions. During the Northeast monsoon season, wind blow predominantly from north and sometime from North-North-West and North-North-East directions. The average wind velocity during winter period is 8.7 km/hr at 08.30 hr and 12.5km/hr. at 17.30 hrs, during the hot weather period; it is 10.2 km/hr at 08.30 hrs, 18.1 km/hr at 7.30 hrs and 12.0 km/hr for 24 hrs. During the Southwest monsoon, the wind velocity is 11.2 km/hr at 08.30 hrs, 14.1 km/hr at 17.30 hrs and 11.2 km/hr for 24 hrs and during the Northeast monsoon; it is 9.1 km/hr at 08.30 hrs. 9.6 km/hr at 17.30 hrs and 8.7 km/hr for 24 hrs.

2.5.5 Solar Radiation

Solar radiation intensity (from 06.00 to 19.00 hrs) during winter ranges from 0.07 to 62.66 Cal / cm² / hr, during hot weather range from 0.92 to 71.87 Cal / cm² / hr, during south-west monsoon it range from 1.00 to 59.46 Cal/ cm²/hr and during north-east monsoon it range from 0.10 to 44.43 Cal/ cm²/hr.

2.5.6 Evaporation

Evaporation during winter period was 237 mm, hot weather period was 498 mm, Southwest monsoon period was 694 mm and in the Northeast monsoon period was 301 mm. the annual evaporation is of the order of 1600 mm.

2.5.7 Potential Evapo-Transpiration (Thornthwaite's Method)

Mean monthly temperature of Puducherry station were utilised for computing month-wise potential Evapo-transpiration. During the winter period, the average potential Evapo-transpiration is 97 mm, in hot weather period it increases from 142 to 183 mm, during the Southwest monsoon, it decreases from 183 to 156 mm and in the Northeast monsoon period, it further decreases from 145 to 94 mm.

2.5.8 Relative Humidity

The average relative humidity during the winter period is 81% at 08.00 hrs and 71% at 18.00 hrs. During the hot weather period, it ranges from 81 % to 73% at 08.00 hrs and 75% at 18.00 hrs. During the Southwest monsoon, it ranges from 66% to 81% at 08.00 hrs and 64% to 79% at 18.00 hrs and during the Northeast monsoon; it is 87% at 08.00 hrs and 80% at 18.00hrs.

2.5.9 Sunshine Hours

During the winter period, the average sunshine hours is 10.2 hrs, during the hot weather period, it decreases from 10.3 to 9.5 hrs, during the Southwest monsoon and the Northeast monsoon periods, the average sunshine hours is about 7.1.

2.5.10 Cloud Density

During winter, the average cloud density is 59 percent in the mornings and 55 percent in the evenings. During the hot weather period, the average cloud density increases from 50 percent to 74 percent in the morning and 36 percent to 75 percent in the evenings. During Southwest monsoon period, the average is 84 percent in the mornings and 89 percent in the evenings. During Northeast monsoon period, the average is 77 percent in the mornings and 82 percent in the evenings.

2.5.11 Cyclonic Storms / Severe Cyclonic Storms (CS/SCS):

Puducherry and the adjoining areas are affected by Cyclone/ Severe Cyclones, which originate from the Bay of Bengal and move in a westerly northwesterly direction. From the frequency point of view there is no possibility of CS/SCS during January and February as well as June to September. During the Northeast monsoon period, the maximum number of cyclones/severe cyclones has been in number (i.e) 6 in frequency in the month of November followed by two in December and April and one each during March, May and October. The highest estimated wind speed in the order of 189 km/hr and the lowest estimated wind speed in the order of 83 km/hr have hit the Puducherry during the past.

2.6 AGRO-CLIMATE CLASSIFICATION OF THE PUDUCHERRY AREA

Climatic classification is made according to the Thornthwaite's technique using potential Evapo-transpiration values computed as per Thornthwaite's formula. As per this, the region falls under Semi-arid region. The technical data of the region are given below. From the above data it is clear that this region comes under dry sub-humid, mega thermal climate with moderate winter water surplus.

Technical Data on Evapo-Transpiration

Potential Evapo-transpiration	: 1732mm
Summer concentration	: 28.2 percent
Mean annual precipitation	: 1227 mm
Water surplus	: 308.5 mm
Water deficiency	: 648.0 mm
Humidity index	: 18.7
Aridity index	: 39.3
Moisture index	: 20.6

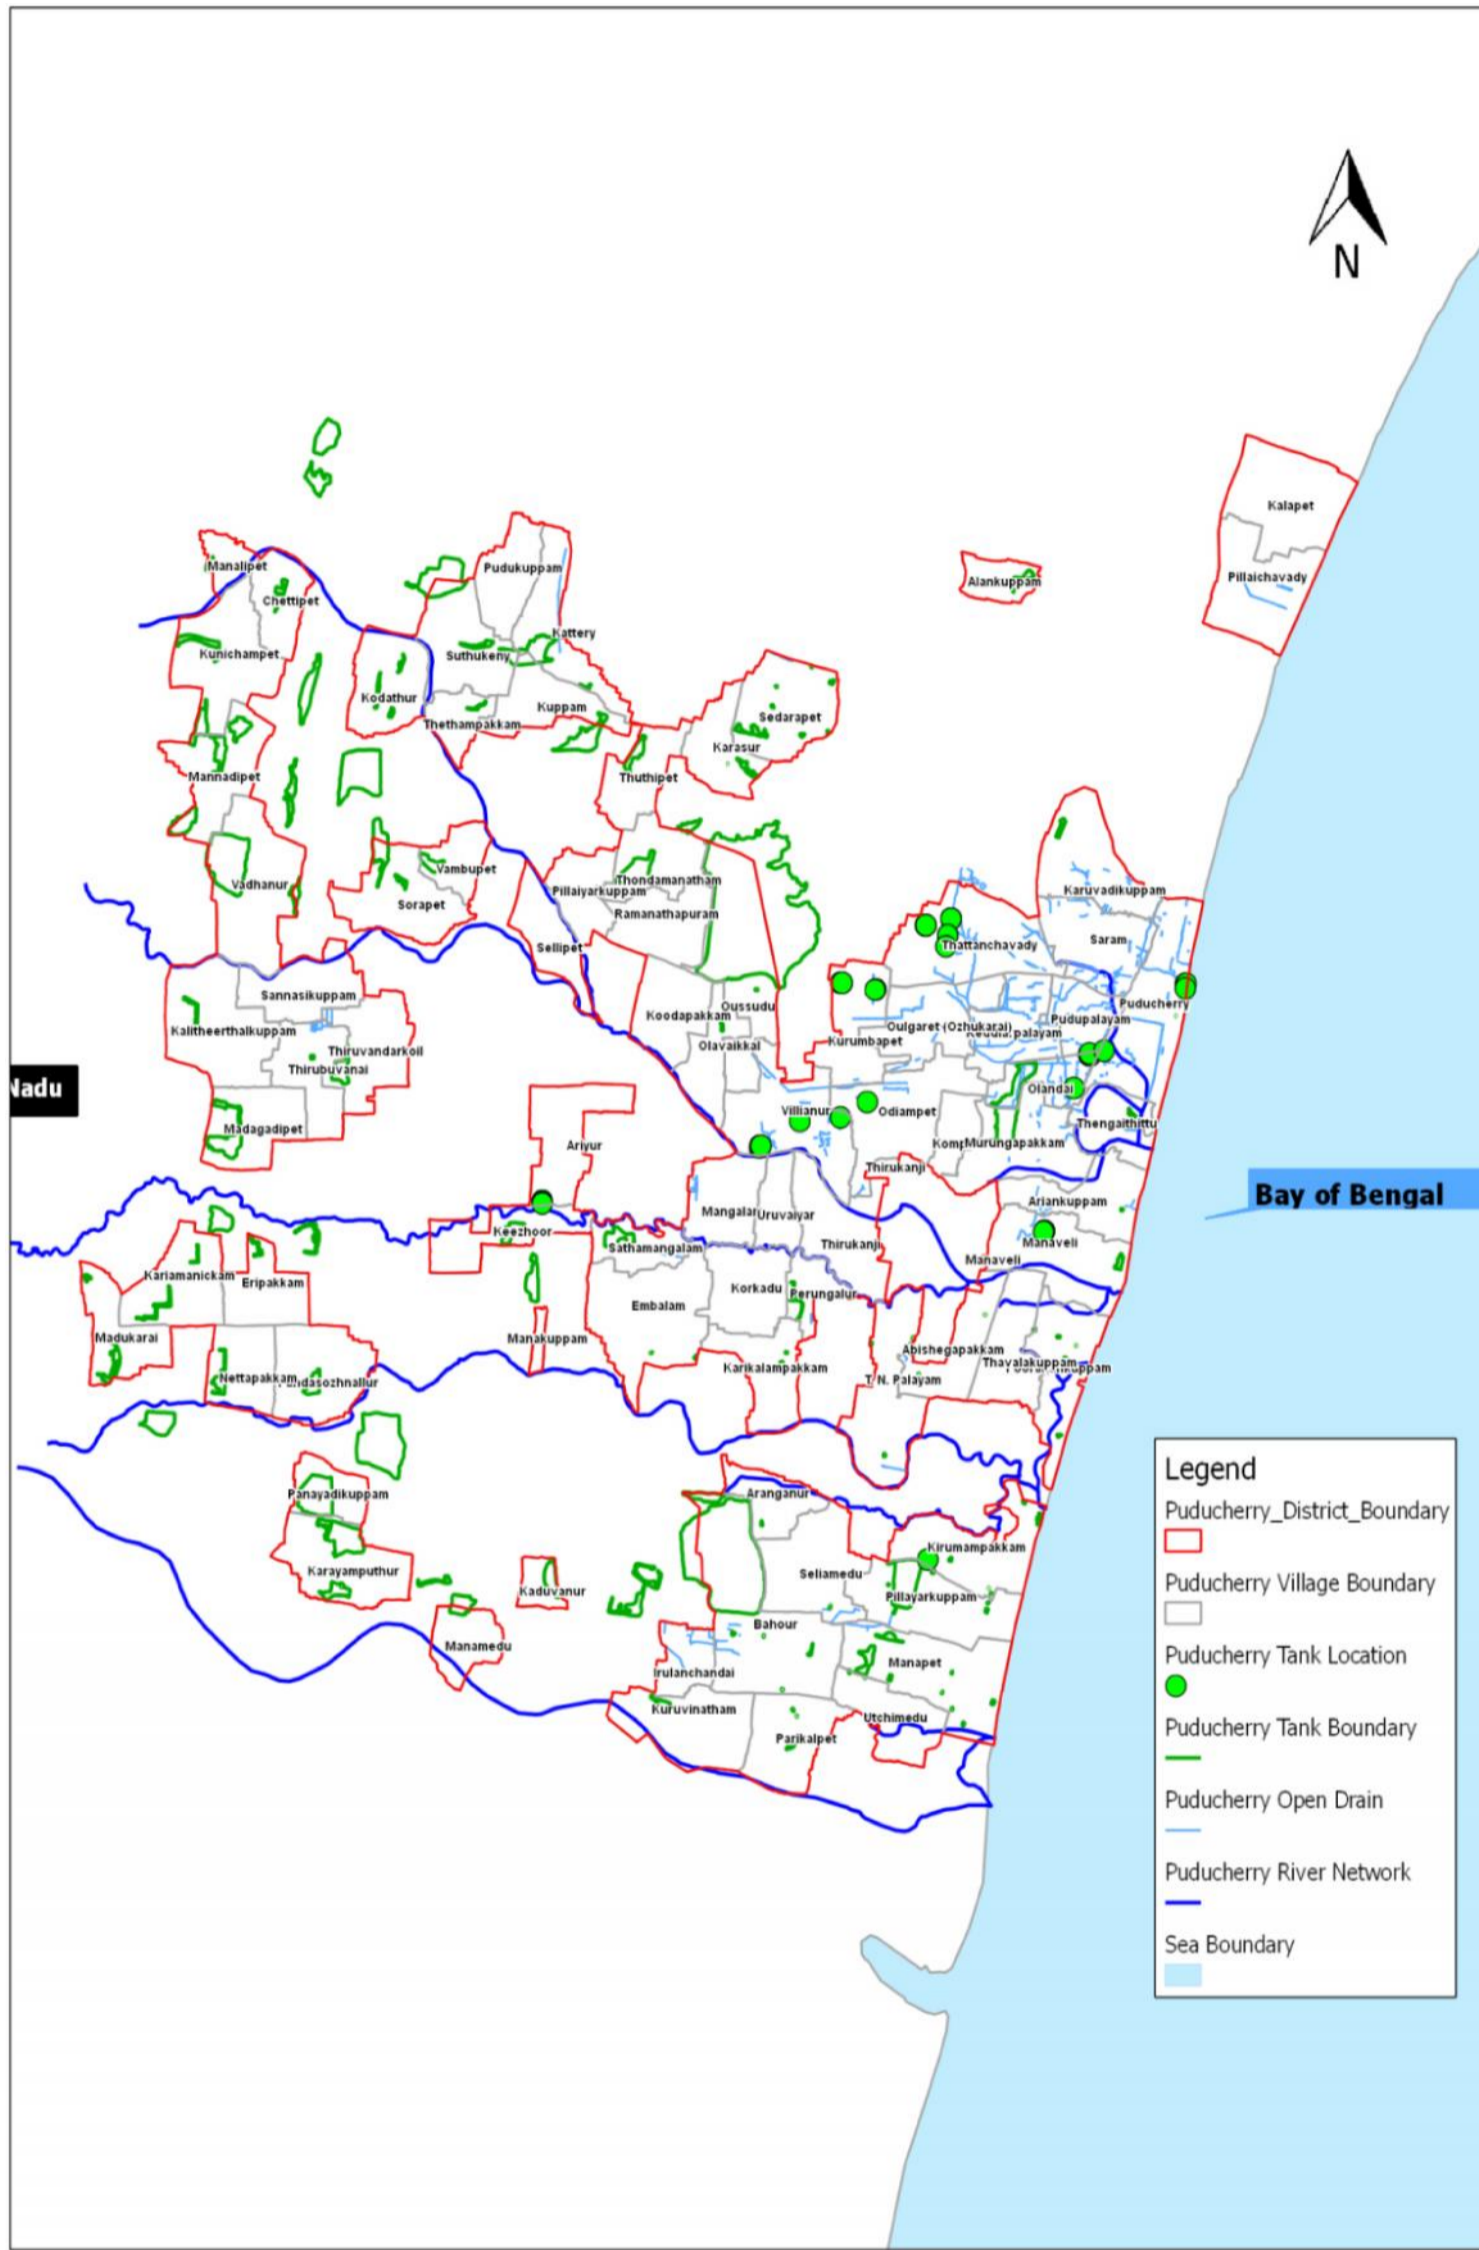

To sum up, the Puducherry and its neighborhood falls under rainfall surplus category and the temperatures are high in the months of May and June. The areas are chiefly benefited from the Northeast monsoon recording to 62 percent of the total amount of rainfall. It is also located close to the cyclone prone zone of the East coast namely Cuddalore. The maximum temperature varies from 28.2°C to 36.6°C and monthly potential Evapo-transpiration varies from 92 to 183 mm.

2.7 IRRIGATION & DRAINAGE SYSTEM IN PUDUCHERRY

During the year 2015-16, the Gross area irrigated under different sources of irrigation was 21080 hectares as against 21627 hectares in 2014-15. Tube wells and canals are main source of irrigation. Two rivers run into Puducherry region flowing from the neighbouring district of Tamilnadu at the estuary point viz., South Pennaiyar and Gingiyar, which is otherwise called as Sankaraparani. The two rivers and their branches are not perennials.

The Puducherry region is bestowed with 83 tanks which scattered in all over the region usually fills up during the North East Monsoon. In the back drop of depletion of ground water table, water is stored in the tanks for replenishing the ground water. In such way, tanks are serving only as a recharging mechanism by which groundwater table have enhanced considerably simultaneous with the prevention of intruding seawater in to sweet water aquifers. The water availability from this source for irrigation has been firmly inadequate. Hence, the necessity for more dependency on groundwater has been automatically increasing. As far as Puducherry region is concerned 100% of irrigation activities are undertaken depending upon ground water source. Paddy is the principal crop amongst all the crops cultivated in the wet land for three crop season irrigated my means of tube wells. Ponds exist in all over Puducherry region but they are not used for agricultural activities.

4 CHAPTER VULNERABLE AREAS

Vulnerability is defined as “the extent to which a community, structure, service, or geographic area is likely to be damaged or disrupted by the impact of particular hazard, on account of their nature, construction and proximity to hazardous terrain or a disaster prone areas”. The concept of vulnerability therefore leads to calculation of risk. Risk management would therefore mean the level of social and economic ability to cope with the resulting event in order to resist major disruption or loss. This susceptibility and vulnerability to each type of threat will depend on its respective differing characteristics.

The rainfall data and water holding capacity of different tanks mentioned in the previous chapter give knowledge to what extent the community could withstand the flood situation. But it is not predictable in respect of low lying areas where the habitation exists as the situation not only depends on the rainfall but to what extent the area has been facilitated in draining the rainwater. Therefore in order to have periodical maintenance and to monitor the situation during rainy season, a list of low lying areas is given in the Annexure - V.

Those vulnerable have to be given top priority, immediate relief and rehabilitation has to be effected without much delay. Preparedness and prevention measures are cast upon more particularly on PWD and Local Administration Department and their duties and responsibility are enunciated in various chapters of this manual.

4.1 Hazard Risk Assessment and Vulnerability Mapping: Puducherry District

Puducherry region consists of four Taluks viz. Puducherry, Oulgaret, Villianur and Bahour. Among these, Puducherry and the Bahour are the coastal Taluks that lies in the heavy wind and cyclone zone while other four Taluks lies in the flood zone. Puducherry has the land slope from west to east and from north to south. Since the district is situated at the coastal, it drains water not only within the district, but also from the catchments close by relatively the mid land slopes make drainage difficult.

A part of the problem owes its genesis to the location of the district. The district has a coastline of approximately 24 km. Therefore the district is vulnerable to the Tsunami, cyclonic, low depressions and the resultant rains, which cause floods and storm water inundation.

Puducherry has an area of 292 Sq. Km. comprising of extremely fertile and well irrigated lands benefiting from water draining over fields and through major and minor river systems. The district however suffers from the flooding when excess water flows down these local rivers and over the fields due to Northeast monsoon rains in the river basins and in the district itself.

The drainage is poor and the encroachments over the drought years have lead to a scenario where, even rainfalls, which are slightly above normal, can cause floods disrupting the normal course of work. Coupled with this is the perennial problem of low water carrying capacity of the lakes.

Puducherry region has been classified as a multi-hazard prone district. It is highly vulnerable to cyclone, flood / heavy rains, tsunami, fire and industrial hazards. Tsunami 2004 severely affected the district. The region falls in earthquake zone II and does not have any history of damaging earthquake events. The district has a plain to rolling topography and is not vulnerable to landside hazard.

Multi hazard prone area in Puducherry district (map prepared based on grid based analysis in GIS)

The historical hazard data points towards a clear clustering of events in a certain part of the year. For instance, cyclone hazards occur in Puducherry district mostly in the months of November, December and January. Occurrence of heavy rain and flood is also during these months. Outbreak of epidemics either waterborne or vector borne disease, in the district is mostly during the rainy months. Most of the houses have access to tap water and incidences of waterborne diseases are likely to occur only when there is a catastrophic event like the 2004 tsunami.

Heavy rain /Flood

Heavy rain and flood occur frequently in Puducherry district. Heavy rains and floods often cause widespread damage to houses, infrastructure road and communication networks and agricultural crops. Some of the flood events have caused season long impacts on livelihoods for those depend on fishing and agriculture. The modelled flood hazard map is provided in Figure given below. The flood inundation affects mostly low lying areas along major rivers/drains and within 2-3km from the shoreline. Both Oulgaret and Puducherry municipalities are prone to flood hazard while the southern part of the district are relatively less affected by flood. Historical flood hazard data shows damaging floods occurred in 2007, 2006, 2005, 1998 and 1996.

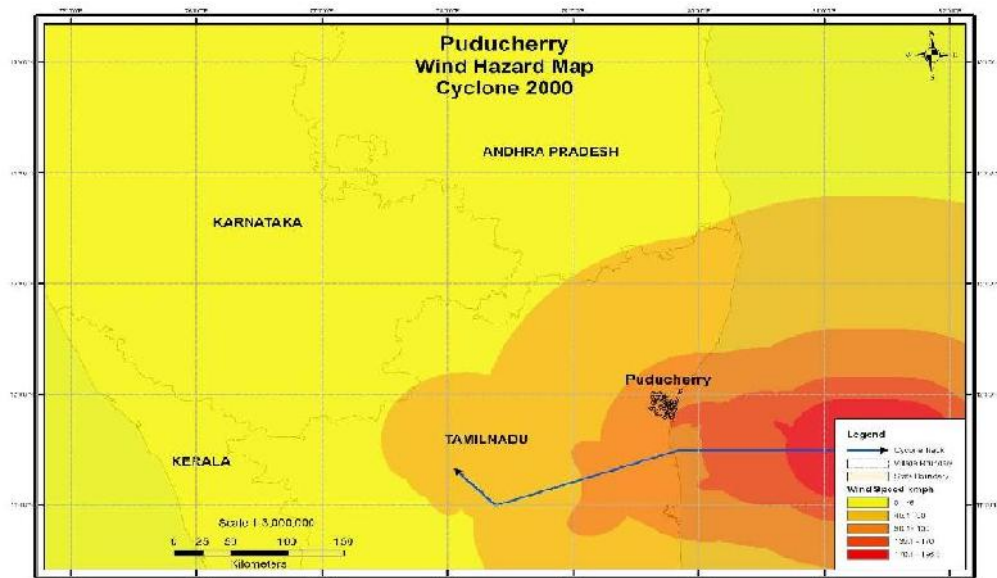

The coastal villages have a higher population density compared to the UT's average density of 2,547 persons/sq. km (as per 2011 Census data) and is more vulnerable to flood. As flood inundation/water logging affects Oulgaret and Puducherry municipalities to a greater extent than the rest of the district, urban population is affected more compared to the rural population in the district.

Cyclone

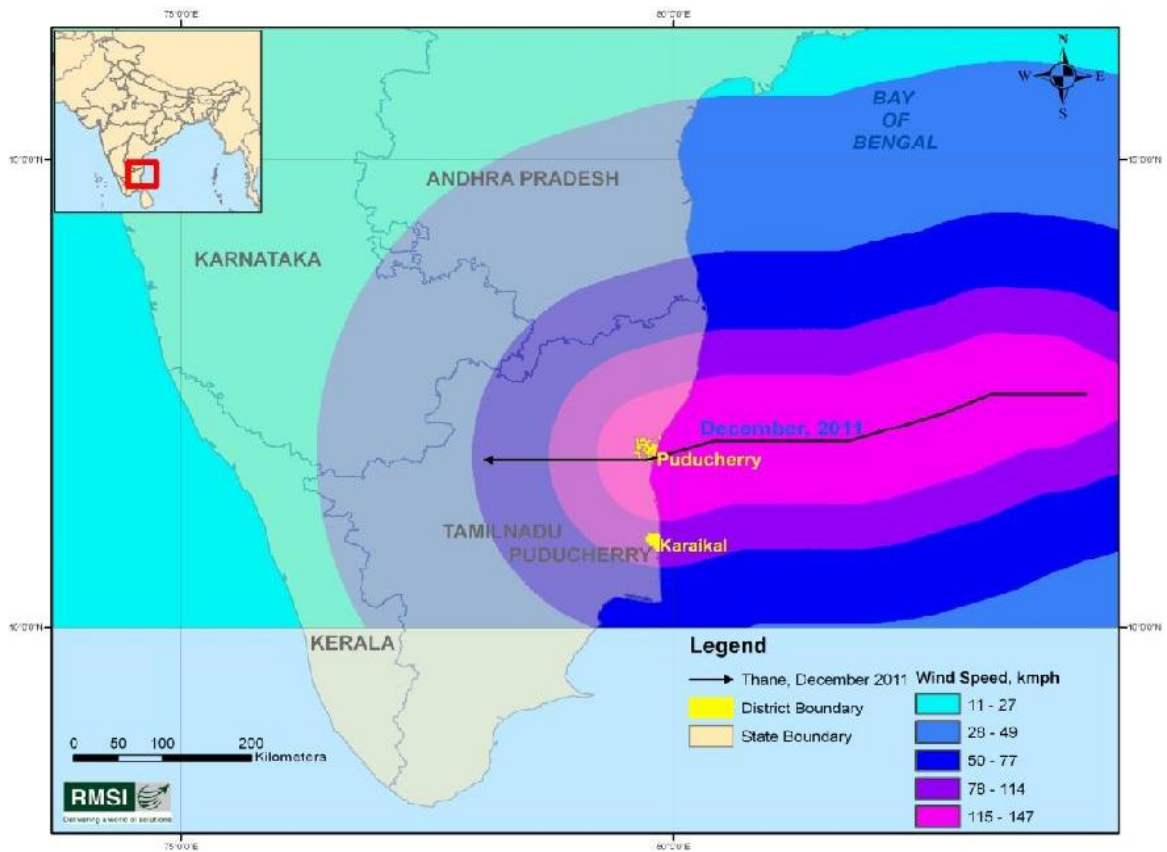

The east coast of India is vulnerable to cyclones originating in the Bay of Bengal mostly during November, December and January months. As per the BMTPC Vulnerability Atlas of India, the maximum probable wind speed in the district is 64 miles/sec and is categorized in the high damage risk zone (47 miles/sec). The cyclone Thane (2011), Nisha (2008), the cyclone of 2000 and 1993 caused wide spread damage in the district. The cyclonic situation can lead to wave surges leading to water inundation in the coastal areas. However, in the case of Puducherry district, the damage is often caused by high wind velocity than due to wave surge and water inundation.

Strong wind

The district is under the influence of strong winds mainly during May, June and July months due to the monsoonal activities in the subcontinent. During May, the peak summer period, unbalanced tropospheric temperature causes a downburst (strong wind normally sustained for not more than 3 to 5 minutes) coupled with heavy thunderstorm over the district. However, there is no record of damage and life loss due to strong winds in the district.

Tsunami

The 2004 tsunami caused wide spread damage and loss of life in the district. Apart from that, there is no historical event recorded in the district. Figure given below shows the modelled water inundation due to the tsunami 2004 in Puducherry district.

Tsunami (2004) inundation map: Puducherry district

Drought

Drought is not a common hazard in the district.

4.2 Probable Threat of Human Induced Disasters: Puducherry District

Nuclear

The nuclear power station installation of Kalpakkam (about 71 km north) and the Kudamkullam (about 400 km south) in Tamil Nadu are the closest nuclear installations to this district. Kalpakkam has all the safety norms and onsite and offsite disaster plans in place. There is no historical disaster events recorded in both these installations.

Terrorism

There is no historical terrorism related events occurred in the district in the past. However, considering that the district being one of the prime tourism destination and pilgrimage district, the risk involved is high.

Stampede

The district has several temples that conduct annual festivals where thousands gather, both pilgrims and tourist. As these are religious festival there is a large participation of women and children. For this reason, there is risk of stampede in case the crowd is not managed well. Some of the main annual festivals of the districts are:

1. Veerampattanam car festival of Shri Sengazhuneer Amman Temple is an annual festival that takes place in the beach of Veerampattanam in July-August month where thousands of people gather.

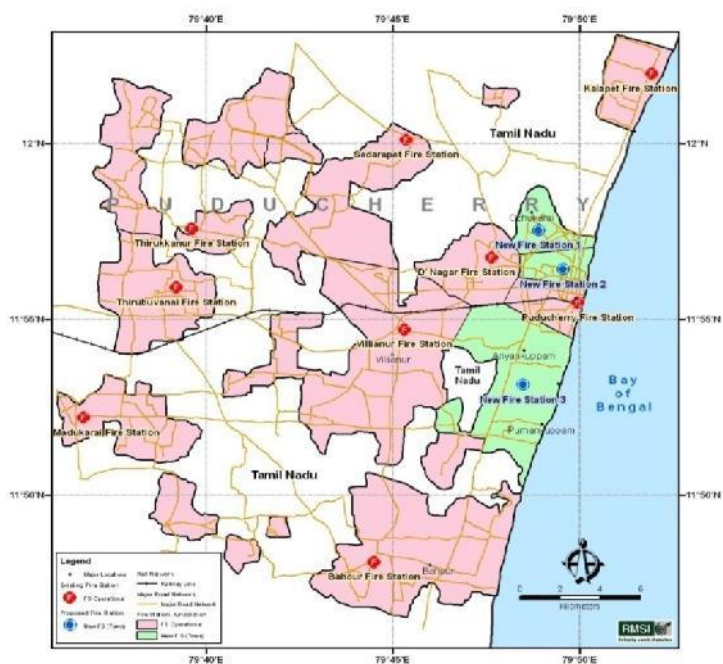

2. Masi magam is an important festival for Puducherry celebrated during the tamil month of masi, (February- March) on full moon day. This is one of the festival where largest crowd gather in Puducherry (more than 20,000) and main location are Kuruchikuppam and Vaitikuppam. Deities from as many as 38 temples in and around Puducherry are brought in ceremonial processions to the seashore for a symbolic immersion ceremony. The festival mainly host on the sea shore. This is an annual festival with a grand celebration every 12 years.

Industrial/chemical hazard

Puducherry has 41 large scale and 127 medium scale industries (Department of Industries and Commerce, Puducherry) which includes oil tanks and chemical industries handling highly inflammable products. Other than the toxic gas leak that happened in a factory of Chemfab Alkalis Limited in 26th January 2011, there is no major industrial hazard event reported in the district. However, due to the presence of large number of industries the district is categorised as moderate risk district. The environmental and land pollution due to the increasing use of disposable plastic bags is increasing particularly in the urban and coastal areas.

Fire hazard

During 2013, Puducherry district has recorded more than 600 big and small size fire events in domestic and commercial areas. The number of fire events has decreased compared to past; however, the economic loss due to fire is increasing. The large number of thatched houses which are susceptible to fire are being converted to pucca houses due to improved economic conditions and through the tsunami relief and reconstruction activities and Costal Disaster Risk Reduction Programme thus reducing the domestic fire vulnerability.

Location of operational and proposed fire stations in Puducherry district

(Source: RMSI 2013, Fire risk and hazard analysis in the country, Ministry of Home Affairs)

The fire risk and hazard analysis in the country shows 3 new fire stations in Puducherry district and all of them in urban area. This is based on the criteria set by ministry based on population density.

Epidemics

Vector borne diseases like chikungunya and dengue have been reported in the district. The disease outbreak was recorded in India after three decades in 2006 and as per NRHM report 2011, Puducherry district had 498 suspected cases of which 80 were identified with dengue and 3 with chikungunya as per 2010 health records. The incidence rate of dengue was highest in the month of October (12), and August and December (9).

Transportation of hazardous material

There is a heavy traffic of petroleum vehicles coming to the district as well as to the neighbouring places of Tamilnadu.

Road/train accident

Puducherry has a good network of roads. However, there is a high density of vehicles in the district. However, the increase in number of vehicle, people’s scant regard for traffic rules, parking in non-designated areas etc. have lead to traffic congestion and increase in accidents particularly in the municipal areas.

4.3 Risk and Vulnerability Assessment Puducherry

The UT has carried out the risk and vulnerability assessment for Puducherry districts in 2010. Baseline data related to bio-physical, socio-economic and infrastructure were collected from various secondary and primary sources and organised in GIS. Puducherry Decision Support System (PDSS), a GIS based application system is also developed which has the capability of organising various thematic data, perform queries, analyse and generate map prints. The application also has the capability of generating statistical reports and perform simulation hazard models for cyclone, flood and tsunami. The model can generate maps and summary tables on probable losses in terms of life and assets. This kind of exercise can help in developing mitigations and can be used for relief and rescue operations. The central kitchens and shelter locations and important emergency information are also store in this system which can be easily retrieved both in the form of maps (true to scale) and in summary tables.

This District Disaster Management Action Plan has to be implemented keeping in mind the following hazards which also include natural calamities like cyclone, heavy rain, tsunami and Man-made disaster like Chemical pollution, Fire accidents etc.

5 CHAPTER
CRISIS MANAGEMENT FRAMEWORK
AND DEPARTMENT OF REVENUE AND DISASTER MANAGEMENT

The Department of Revenue and Disaster Management, Puducherry has formulated the “Crisis Management Framework and Standard Operating Procedures” for the UT of Puducherry. Different types of crises, various elements and phases of crisis management, Incident Response System (IRS), Emergency Support Functions and SOPs for ESF Teams and their Quick Response Teams (QRTs) are explained in the Framework.

5.1 THE INCIDENT RESPONSE SYSTEM FOR PUDUCHERRY

The Incident Response System (IRS) is an on-scene, all- risk, flexible modular system adaptable to any scale of natural as well as man-made emergency/incidents. The IRS seeks to strengthen the existing disaster response management system by ensuring that the designated controlling/responsible authorities at different levels are backed by trained Incident Response Teams (IRTs), whose members have been trained in the different facets of emergency/disaster response management. The IRS will not put in place any new hierarchy or supplant the existing system, but will only reinforce it. When an IRT is deployed for an incident, all concerned agencies of the Government will respond as per the assessment of the Team.

This system therefore enables proper coordination amongst the different agencies of the Government. The four Response functions in the Incident Response System are as follows:

1. Responsible Officer - Has overall responsibility at the incident. Determines objectives and Establishes priorities based on the nature of the incident, available resources and Government policy.
2. Operations - Develops tactical organization and directs all resources to carry out the Incident Action Plan (IAP).
3. Planning - Develops the Incident Action Plan (IAP) to accomplish the objectives. Collects and evaluates information and maintains status of assigned resources.
4. Logistics - Provides resources and all other services needed to support the organization.

Incident Response System for District

Figure -1 Incident Command System for the District

b) District Level Incident Response System:

At the District level, one District Headquarters Team with the primary function of assisting the Collector (Responsible Officer) in handling tasks like general coordination, distribution of relief materials, media management and the overall logistics is envisaged.

In the District level, Incident Responsible System the Collector is responsible officer. Senior Superintendent of Police (L&O) is the Safety Officer, Public Relations Officer, Information Department is the Information Officer and Commissioner, Municipality is the Liaison Officer to the Incident Commander. Planning Unit headed by Joint Director (Planning), Logistic Unit headed by Superintending Engineer (PWD), Operation Unit headed by Sub Divisional Magistrate and Finance headed by Deputy Director of Accounts and Treasuries. Situation unit headed by Block Development Officer, Resource Unit headed by Regional Transport Officer, Supply unit by Deputy Director (Civil Supplies), Medical Unit by Deputy Director (Health).

5.2 EMERGENCY SUPPORT FUNCTIONS

Emergency Support Functions are some of the most common functions carried out in any response activity to a disaster either man-made or natural. The causes of emergencies vary but the potential effects of these emergencies are similar. Irrespective of the disaster or crisis situation the types of support functions are fairly similar and such support functions are called as Emergency Support Functions.

The Crisis Management Plan is based on the premise that the Emergency Support Functions (ESFs) performed by various Departments and organizations during emergency operations generally are similar to the normal day to day functions. The same personnel and material resources will be employed in both cases. Day-to-day tasks or operations that do not contribute directly to the emergency may be suspended or re-directed for the duration of any emergency disaster and efforts that would normally be assigned to those tasks will be channeled towards emergency and disaster ESF as assigned.

Emergency Support Functions is a functional area of response activity established to facilitate the delivery of critical assistance required during their immediate response phase of a disaster / crisis to save lives, protect property and public health, and to maintain public safety.

It is important to note that while the causes of emergencies vary greatly, the potential effects of emergencies do not. This means that the District can plan to deal with effects common to several hazards, rather than develop separate plans for each hazard. For example, earthquakes and floods, can force people from their homes. The District administration can develop a plan and an organization around the task, or function, of finding shelter and food for the displaced with minor adjustments for the probable rapidity, duration, location, and intensity of different hazards based on the requirements. The District administration can do the same for other common tasks. In fact, a critical aspect of planning for the response to emergency situations is to identify all of these common tasks, or functions, that must be performed, assign responsibility for accomplishing each function, and ensure that tasked organizations have prepared SOPs that detail how they will carry out critical tasks associated with the larger function.

The incident commander (State level) is authorized to trigger a particular ESF into operation based on the nature and magnitude of Crisis/Disaster.

National Disaster Management Guidelines –(School safety Policy 2016) National School Safety Guidelines

Emphasize on the need for active mainstreaming of Disaster risk reduction in all the school education in the country.

This would require collaboration between the State education department and DDMA.

1. It needs capacity development activities such as sensitization of officials, public awareness on disasters, training of teachers and students.
2. Pre-positioning equipment's for emergency response.
3. Creation of educational material on disaster.
4. Monitoring of risk.

Approach to implementation

School safety efforts need to consider all kinds of hazards that may affect the well-being of all children. Hazards include structural and non-structural factors. Structural factors include dilapidated buildings, poorly designed structures, faulty constructions, poorly maintained infrastructure, loose building elements etc.

While non-structural factor include loosely placed heavy objects:

1. Almirahs
2. Infestation of the campus by snakes and other pests.
3. Broken or no boundary walls
4. Uneven flooring, blocked evacuation routes, poorly designed and placed furniture that may cause accidents and injuries, inadequate sanitation facility etc.

Safety of children , their teachers and parents needs to be approached holistically to include visible as well as invisible risks that may be sudden or have built-up slowly over a period of time.

Policy provisions to make school safer

Unsafe structures can increase the vulnerability of children who are the primary target group of such efforts. Thus it is important to ensure that all development actions taken even in non-emergency times are designed with a view to ensuring their performance during emergencies. So, it is imperative that the existing institutions at the National, State level and District level are strengthened and capacitated to take responsibility of school safety planning and action school safety as an indicator of quality for planning, execution and monitoring.

1. Safety principles need to be incorporated in day to day functioning of the educational institutions in the country
2. Thus institutions involved in providing education need to evolve a mythology and an approach of their own that looks at safety as a continuously monitored indicator of quality.

12 Do's and Don'ts

12.1 Flood

What to do before a flood

To prepare for a flood, you should:

1. Avoid building in flood prone areas unless you elevate and reinforce your home.
2. Elevate the furnace, water heater, and electric panel if susceptible to flooding.
3. Install "Check Valves" in sewer traps to prevent floodwater from backing up into the drains of your home.
4. Contact community officials to find out if they are planning to construct barriers (levees, beams and floodwalls) to stop floodwater from entering the homes in your area.
5. Seal the walls in your basement with waterproofing compounds to avoid seepage.

If a flood is likely to hit your area, you should:

1. Listen to the radio or television for information.
2. Be aware that flash flooding can occur. If there is any possibility of a flash flood, move immediately to higher ground. Do not wait for instructions to move.
3. Be aware of streams, drainage channels, canyons, and other areas known to flood suddenly. Flash floods can occur in these areas with or without such typical warnings as rain clouds or heavy rain.

If you must prepare to evacuate, you should:

1. Secure your home. If you have time, bring in outdoor furniture. Move essential items to an upper floor.
2. Turn off utilities at the main switches or valves if instructed to do so. Disconnect electrical appliances. Do not touch electrical equipment if you are wet or standing in water.

If you have to leave your home, remember these evacuation tips:

1. Do not walk through moving water. Six inches of moving water can make you fall. If you have to walk in water, walk where the water is not moving. Use a stick to check the firmness of the ground in front of you.
2. Do not drive into flooded areas. If floodwaters rise around your car, abandon the car and move to higher ground if you can do so safely. You and the vehicle can be quickly swept away.

12.2 Urban Flood

Before floods

1. Do not litter waste, plastic bags, plastic bottles in drains
2. Try to be at home if high tide and heavy rains occur simultaneously
3. Listen to weather forecast at All India Radio, Doordarshan. Also, messages by Municipal bodies from time to time and act accordingly.
4. Evacuate low lying areas and shift to safer places.
5. Make sure that each person has lantern, torch, some edibles, drinking water, dry clothes and necessary documents while evacuating or shifting.
6. Make sure that each family member has identity card.
7. Put all valuables at a higher place in the house.

In the Flood Situation

1. Obey orders by government and shift to a safer place.
2. Be at safe place and they try to collect correct information.
3. Switch of electrical supply and don't touch open wires.
4. Don't get carried away by rumors and don not spread rumors.

DO's

1. Switch off electrical and gas appliances, and turn off services off at the mains.
2. Carry your emergency kit and let your friends and family know where you are going.
3. Avoid contact with flood water it may be contaminated with sewage,oil,chemicals or other substances.
4. If you have to walk in standing water, use a pole or stick to ensure that you do not step into deep water, open manholes or ditches.
5. Stay away from power lines electrical current can travel through water, Report power lines that are down to the power company.
6. Look before you step-after a flood, the ground and floors are covered with debris, which may include broken bottles, sharp objects, nails etc.Floors and stairs covered with mud and debris can be slippery.
7. Listen to the radio or television for updates and information.
8. If the ceiling is wet shut off electricity. Place a bucket underneath the spot and poke a small hole into the ceiling to relieve the pressure.
9. Use buckets,clean towels and mops to remove as much of the water from the afflicted rooms as possible.
10. Place sheets of aluminium foil between furniture wet carpet.

Don't's

1. Don't walk through flowing water - currents can be deceptive, and shallow, fast moving water can knock you off your feet.
2. Don't swim through fast flowing water - you may get swept away or struck by an object in the water.
3. Don't drive through a flooded area - You may not be able to see abrupt drop - offs and only half a meter of flood water can carry a car away. Driving through flood water can also cause additional damage to nearby property.
4. Don't eat any food that has come into contact with flood water.
5. Don't reconnect your power supply until a qualified engineer has checked it. Be alert for gas leaks - do not smoke or use candles, lanterns, or open flames.
6. Don't scrub or brush mud and other deposits from materials, This may cause further damage.
7. Never turn on ceiling fixtures if ceiling is wet. Stay away from ceilings those are sagging.
8. Never use TVs, VCRS, CRT terminals or other electrical equipment while standing on wet floors, especially concrete.
9. Don't attempt to remove standing water using your vacuum cleaner.
10. Don't remove standing water in a basement too fast. If the pressure is relieved too quickly it may put undue stress on the walls.

12.3 Cyclone

Before the Cyclone season:

1. Check the house; secure loose tiles and carry out repairs of doors and windows
2. Remove dead branches or dying trees close to the house; anchor removable objects such as lumber piles, loose tin sheets, loose bricks, garbage cans, sign-boards etc. which can fly in strong winds
3. Keep some wooden boards ready so that glass windows can be boarded if needed
4. Keep a hurricane lantern filled with kerosene, battery operated torches and enough dry cells
5. Demolish condemned buildings
6. Keep some extra batteries for transistors
7. Keep some dry non-perishable food always ready for use in emergency

Necessary actions

The actions that need to be taken in the event of a cyclone threat can broadly be divided into :

1. Immediately before the cyclone season
2. When cyclone alerts and warnings are communicated
3. When evacuations are advised
4. When the cyclone has crossed the coast

When the Cyclone starts

1. Listen to the radio (All India Radio stations give weather warnings).
2. Keep monitoring the warnings. This will help you prepare for a cyclone emergency.
3. Pass the information to others.
4. Ignore rumours and do not spread them; this will help to avoid panic situations.
5. Believe in the official information
6. When a cyclone alert is on for your area continue normal working but stay alert to the radio warnings.
7. Stay alert for the next 24 hours as a cyclone alert means that the danger is within 24 hours.

When your area is under cyclone warning get away from low-lying beaches or other low-lying areas close to the coast

1. Leave early before your way to high ground or shelter gets flooded
2. Do not delay and run the risk of being marooned
3. If your house is securely built on high ground take shelter in the safe part of the house. However, if asked to evacuate do not hesitate to leave the place.
4. Board up glass windows or put storm shutters in place.
5. Provide strong suitable support for outside doors.
6. If you do not have wooden boards handy, paste paper strips on glasses to prevent splinters. However, this may not avoid breaking windows.
7. Get extra food, which can be eaten without cooking. Store extra drinking water in suitably covered vessels.
8. If you have to evacuate the house move your valuable articles to upper floors to minimize flood damage.
9. Ensure that your hurricane lantern, torches or other emergency lights are in working condition and keep them handy.
10. Small and loose things, which can fly in strong winds, should be stored safely in a room.
11. Be sure that a window and door can be opened only on the side opposite to the one facing the wind.
12. Make provision for children and adults requiring special diet.
13. If the centre of the cyclone is passing directly over your house there will be a lull in the wind and rain lasting for half an hour or so. During this time do not go out; because immediately after that, very strong winds will blow from the opposite direction.
14. Switch off the electrical mains in your house.
15. Remain calm.

When Evacuation is instructed

1. Pack essentials for yourself and your family to last a few days. These should include medicines, special food for babies and children or elders.
2. Head for the proper shelter or evacuation points indicated for your area.
3. Do not worry about your property
4. At the shelter follow instructions of the person in charge.
5. Remain in the shelter until you are informed to leave

Post-cyclone measures

1. You should remain in the shelter until informed that you can return to your home.
2. You must get inoculated against diseases immediately.
3. Strictly avoid any loose and dangling wires from lamp posts.
4. If you have to drive, do drive carefully.
5. Clear debris from your premises immediately.
6. Report the correct losses to appropriate authorities.

12.4 Earthquake

What to Do Before an Earthquake

1. Repair deep plaster cracks in ceilings and foundations. Get expert advice if there are signs of structural defects.
2. Anchor overhead lighting fixtures to the ceiling.
3. Follow BIS codes relevant to your area for building standards
4. Fasten shelves securely to walls.
5. Place large or heavy objects on lower shelves.
6. Store breakable items such as bottled foods, glass, and china in low, closed cabinets with latches.
7. Hang heavy items such as pictures and mirrors away from beds, settees, and anywhere that people sit.
8. Brace overhead light and fan fixtures.
9. Repair defective electrical wiring and leaky gas connections. These are potential fire risks.
10. Secure water heaters, LPG cylinders etc., by strapping them to the walls or bolting to the floor.
11. Store weed killers, pesticides, and flammable products securely in closed cabinets with latches and on bottom shelves.
12. Identify safe places indoors and outdoors.
 - a. Under strong dining table, bed
 - b. Against an inside wall
 - c. Away from where glass could shatter around windows, mirrors, pictures, or where heavy bookcases or other heavy furniture could fall over
 - d. In the open, away from buildings, trees, telephone and electrical lines, flyovers and bridges
13. Know emergency telephone numbers (such as those of doctors, hospitals, the police, etc)
14. Educate yourself and family members

What to Do During an Earthquake

Stay as safe as possible during an earthquake. Be aware that some earthquakes are actually foreshocks and a larger earthquake might occur. Minimize your movements to a few steps that reach a nearby safe place and stay indoors until the shaking has stopped and you are sure exiting is safe.

If indoors

1. DROP to the ground; take COVER by getting under a sturdy table or other piece of furniture; and HOLD ON until the shaking stops. If there is no a table or desk near you, cover your face and head with your arms and crouch in an inside corner of the building.
2. Protect yourself by staying under the lintel of an inner door, in the corner of a room, under a table or even under a bed.
3. Stay away from glass, windows, outside doors and walls, and anything that could fall, (such as lighting fixtures or furniture).
4. Stay in bed if you are there when the earthquake strikes. Hold on and protect your head with a pillow, unless you are under a heavy light fixture that could fall. In that case, move to the nearest safe place.
5. Use a doorway for shelter only if it is in close proximity to you and if you know it is a strongly supported, load bearing doorway.
6. Stay inside until the shaking stops and it is safe to go outside. Research has shown that most injuries occur when people inside buildings attempt to move to a different location inside the building or try to leave.
7. Be aware that the electricity may go out or the sprinkler systems or fire alarms may turn on.

If outdoors

1. Do not move from where you are. However, move away from buildings, trees, streetlights, and utility wires.
2. If you are in open space, stay there until the shaking stops. The greatest danger exists directly outside buildings; at exits; and alongside exterior walls. Most earthquake-related casualties result from collapsing walls, flying glass, and falling objects.

If in a moving vehicle

1. Stop as quickly as safety permits and stay in the vehicle. Avoid stopping near or under buildings, trees, overpasses, and utility wires.
2. Proceed cautiously once the earthquake has stopped. Avoid roads, bridges, or ramps that might have been damaged by the earthquake.

If trapped under debris

1. Do not light a match.
2. Do not move about or kick up dust.
3. Cover your mouth with a handkerchief or clothing.
4. Tap on a pipe or wall so rescuers can locate you. Use a whistle if one is available.
Shout only as a last resort. Shouting can cause you to inhale dangerous amounts of dust.

12.5 Tsunami

What to do before and During Tsunami

- ❖ Turn on your radio to learn if there is tsunami warning if an earthquake occurs and you are in a coastal area. Be alert for early warning.
- ❖ If you are in dangerous area, immediately turn all the water gas and electricity and quickly move to a higher ground.
- ❖ Remember once tsunami warning is issued, it could be a matter of minutes, or even seconds, before the wave's hits.
- ❖ If tsunami warning is issued, never go down to the beach to watch the waves come in.
- ❖ Listen to the portable radio to learn when its safe to return home.
- ❖ Stay away from the beach.
- ❖ Learn to understand and notice the sea. If there is noticeable recession in water away from the shore time become caution and move away immediately..
- ❖ Move inland to higher ground immediately and stay there.

What to do after Tsunami

- ❖ After the Tsunami has hit, all food and water should be tested for contamination before they are eaten.
- ❖ All buildings should be checked for gas leaks and electricity shorts before anyone enters.
- ❖ Administrator first old only if you know what to do.
- ❖ Stay away from flooded and damaged areas until official say it is safe to returns.
- ❖ Stay away from debris in the water, it may be safety hazards to boats and people.
- ❖ Save yourself not you're passionate.

12.6 Heat Wave

Heat Wave conditions can result in physiological strain, which could even result in death.

To minimise the impact during the heat wave and to prevent serious ailment or death because of heat stroke, you can take the following measures:

1. Avoid going out in the sun, especially between 12.00 noon and 3.00 p.m.
2. Drink sufficient water and as often as possible, even if not thirsty
3. Wear lightweight, light-coloured, loose, and porous cotton clothes. Use protective goggles, umbrella/hat, shoes or chappals while going out in sun.
4. Avoid strenuous activities when the outside temperature is high. Avoid working outside between 12 noon and 3 p.m.
5. While travelling, carry water with you.
6. Avoid alcohol, tea, coffee and carbonated soft drinks, which dehydrates the body.
7. Avoid high-protein food and do not eat stale food.
8. If you work outside, use a hat or an umbrella and also use a damp cloth on your head, neck, face and limbs
9. Do not leave children or pets in parked vehicles
10. If you feel faint or ill, see a doctor immediately.
11. Use ORS, homemade drinks like lassi, torani (rice water), lemon water, buttermilk, etc. which helps to re-hydrate the body.
12. Keep animals in shade and give them plenty of water to drink.
13. Keep your home cool, use curtains, shutters or sunshade and open windows at night.
14. Use fans, damp clothing and take bath in cold water frequently.

TIPS FOR TREATMENT OF A PERSON AFFECTED BY A SUNSTROKE:

1. Lay the person in a cool place, under a shade. Wipe her/him with a wet cloth/wash the body frequently. Pour normal temperature water on the head. The main thing is to bring down the body temperature.
2. Give the person ORS to drink or lemon sarbat/torani or whatever is useful to rehydrate the body.
3. Take the person immediately to the nearest health centre. The patient needs immediate hospitalisation, as heat strokes could be fatal.

12.7 Landslide

Do's

1. Prepare tour to hilly region according to information given by weather department or news channel.
2. Move away from landslide path or downstream valleys quickly without wasting time.
3. Keep drains clean,
4. Inspect drains for - litter, leaves, plastic bags, rubble etc.
5. Keep the weep holes open.
6. Grow more trees that can hold the soil through roots,
7. Identify areas of rock fall and subsidence of buildings, cracks that indicate landslides and move to safer areas. Even muddy river waters indicate landslides upstream.
8. Notice such signals and contact the nearest Tehsil or District Head Quarters.
9. Ensure that toe of slope is not cut, remains protected, don't uproot trees unless re-vegetation is planned.
10. Listen for unusual sounds such as trees cracking or boulders knocking together.

1. Try to avoid construction and staying in vulnerable areas.
2. Do not panic and loose energy by crying.
3. Do not touch or walk over loose material and electrical wiring or pole.
4. Do not built houses near steep slopes and near drainage path.
5. Do not drink contaminated water directly from rivers, springs, wells but rain water if collected directly without is fine.
6. Do not move an injured person without rendering first aid unless the casualty is in immediate danger.

12.8 Lightning and Thunderstorm

DO' s

- ❖ If the people are in outdoors, they have to need shelter from lightning. Buildings are best for shelter, but if no buildings are available, you can find protection in a cave, ditch, car, hard top automobile or a canyon. Trees are not good cover, since tall trees attract lightning.
- ❖ If you can't find any shelter, avoid the tallest object in the area. If only isolated trees are nearby, your best protection is to crouch in the open.
- ❖ If you hear thunder, don't go outside unless absolutely necessary. Remember, by counting the seconds between the lightning flash and the thunder and dividing by 3, you can estimate your distance from the strike (in km).
- ❖ Stay away from anything that could conduct electricity such as radios, toasters, hairdryers and Telephone. Unplug any electronic equipments before the thunderstorm arrives. This may also include fireplaces, radiators, stoves metal pipes, sinks, and phones.
- ❖ Stay away from window and doors and stay off verandas.
- ❖ Avoid contact with plumbing and metal pipes. Do not wash your hands, do not take a shower, do not wash dishes and do not wash clothes
- ❖ Stay away from TV, plumbing, sinks, tubs, radiators and stoves.
- ❖ Get out of the water. This includes getting off small boats on the water, away from pools, lakes and other water bodies.
- ❖ When you feel electric charge - if your hair stands up or your skin starts to tingle, lightning may be about to strike you. Drop to the ground immediately.
- ❖ Lightning is also a real threat to livestock. Livestock frequently gathers under trees during a thunderstorm, and a single strike can kill many animals. Moving animals into a shelter, preferably an enclosed one that is equipped with a lightning protection system can reduce the risk to livestock.
- ❖ Burying utility lines, including electric and telephone lines can also reduce the likelihood of damage from lightning strikes. Traditional suspended lines are much more likely to be struck and carry lightning charge directly into a building, resulting in damage to electrical appliances and structural damage to the building.

DON'Ts

- ❖ Golf courses and other open grounds. Here the probability of a strike is high.
- ❖ The edge of steep vertical cliffs and mountains.
- ❖ Hill tops. Lightning strikes hill top than a valley.
- ❖ Boats and tents without lightning protection.
- ❖ Don't use any plug-in electrical appliances like hair dryers, electric toothbrushes or electric razors. If lightning strikes your house, they can connect the charge to you.
- ❖ Don't use the telephone during the storm. Lightning may strike the telephone lines outside.
- ❖ Don't use metal objects outside – keep away from metal objects including bike, electrical equipments, fencing, machinery etc.
- ❖ Do not lie on the ground
- ❖ Do not stick with a group or another person if struck outside
- ❖ Never use tree as a shelter
- ❖ Avoid tallest object in the area

DO'S AFTER A LIGHTNING STRIKE

- ❖ Seek immediate medical attention
